Aims and Scope

Chemical Engineering and Processing is a journal intended for practising engineers in industry and academia. The aim of the published articles is to demonstrate how novel discoveries, developments and theories may be used for improved analysis and design of chemical engineering equipment and processes. The Journal offers space for articles on any branch of chemical engineering and is particularly concerned with mechanical, thermal, chemical and bioengineering processes and also includes analyses relating to environmental chemical engineering and sustainable industrial development. Advanced knowledge on engineering fundamentals and processes is presented in such a form that it can be readily implemented into practical application. From time to time, review papers will be published for individual fields of activity to illustrate and summarise scientific and/or technological progress.

♻ The paper used in this publication meets the requirements of ANSI/NISO Z39.48-1992 (Permanence of Paper).

Printed in The Netherlands
