

NEW HYDROGEN ANALYZER for metals

3-10 Minute
Analysis Time

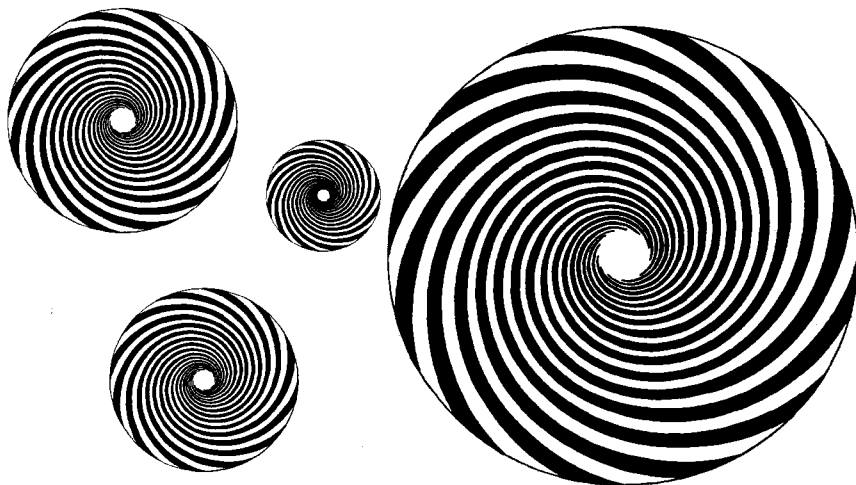

Uses the hot extraction principle. Meets ASTM requirements (tentative procedure) of 1200°C or 2192°F operating temperature. Outgassing of a crucible is eliminated, due to a patented, inert, blank free susceptor. A unique device allows one sample to be loaded at a time, and removed from the system after extraction, without breaking the vacuum!

MANUFACTURERS' LITERATURE

compounds, as well as three short-lived compounds. New England Nuclear Corp. **L-19**

Modernization Service. Folder describes an instrument modernization service which is designed to restore the company's products to a "like-new" condition. Tracerlab, Inc. **L-20**

Testing Services. Two price lists on the company's biological service and metals chemistry service cover various types of studies, tests, and quantitative and semi-quantitative analyses. United States Testing Co. **L-21**

Electrical Heaters. Illustrated bulletin features description of Heat-Pak unit available for both acid and alkaline bath heating. Several models are discussed. Electrical Accessories Co. (*Process Equipment News*, No. 1). **L-22**

Membrane Filters in Radiochemistry. Three-page manual gives information on techniques for radiochemical application of microporous plastic filters. Includes 25 references. Gelman Instrument Co. (*Manual 5*). **L-23**

Electrophoresis Support Media. Eight-page pamphlet describes Microphore, composed of thin microporous cellulose acetate sheet. Gelman Instrument Co. **L-24**

Gas Chromatograph. Illustrated 16-page brochure describes the Model GC-2A gas chromatograph. Beckman Scientific and Process Instruments Division (*Bull.* 787). **L-25**

Closed Loop Process Control. Application data sheet discusses advanced chromatographic closed loop process control through use of the Model 26-212 chromatograph. Consolidated Electrodynamics Corp. (*Bull.* 26212). **L-26**

Additions to Chemicals List. Four-page bulletin discusses five new additions to the company's catalog and includes reference list on each. The substances are *N*-benzoyl-*N*-phenyl hydroxylamine, hydrolyzed starch (Smithies) for starch-gel electrophoresis, dextran, thallium metal, and reserpine. The British Drug Houses, Ltd. **L-27**

Optical Coatings. Brochure shows ten spectral curves representative of some of the coatings produced by the company; also gives a short description of the firm's activities. Optical Coating Laboratory, Inc. **L-28**

Price Lists. Two 16-page price lists cover combustion bombs and calo-
